IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien. Para más información, contacte a Raymond Leon llamando al número 619-975-7323 o enviando un correo electrónico a lmvwater@gmail.com.

Lake Morena Views Mutual Water Company (LMVMWC) Has Levels of Perfluorooctanesulfonic Acid (PFOS) Above the Response Level

Our water system recently confirmed an average concentration of PFOS above the public health-based response level. PFOS may cause immune suppression and cancer in the body. As our customers, you have a right to know what you should do, what happened, and what we are doing to correct this situation.

We routinely monitor the presence of drinking water contaminants. The notification level for PFOS is 4.0 ng/L and the response level is 40 ng/L. Over the last year, the running annual average level of PFOS in Well 1 was 98 ng/L, Well 2 was 5.0 ng/L, and Well 3 was 8.5 ng/L. The PFOS level in Well 1 is above the State Water Board established response level.

What should I do?

- Continue using bottled water for drinking.
- This is not an immediate risk. If it had been, you would have been notified immediately. However, *some people who drink water containing PFOS in excess of the notification level (6.5 ng/L) over many years may experience adverse health effects. PFOS exposures have been shown to cause immune suppression and cancer in laboratory animals.*
- If you have other health issues concerning the consumption of this water, you may wish to consult your doctor.

What happened? What is being done?

LMVMWC has three active wells and one on standby: Well #1, Well #2, Well #3 and Well #5 (standby). Based on water quality sampling, the average level of PFOS over the last year for Well #1 exceeded the PFOS response level. Well #2 had no exceedances based on average levels. To resolve the issue, there are ongoing efforts to consolidate LMVMWC with Lake Morena's Oak Shores Mutual Water Company and Lake Morena County Park. A water treatment plant to treat Nitrate, PFAS compounds (including PFOS), and Uranium will be built for the new consolidated system. Construction is anticipated to be completed by fall 2028. The interim solution is to continue to consume bottled water.

For more information, please contact Raymond Leon at 619-975-7323 or email lmvwater@gmail.com.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this public notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by LMVMWC.

State Water System ID#: CA3700924. Date distributed: October 1, 2026.

Lake Morena Views Mutual Water Company (LMVMWC) Has Levels of Perfluorooctanoic Acid (PFOA) Above the Response Level

Our water system recently confirmed an average concentration of PFOA above the public health-based response level. PFOA may cause increased liver weight and cancer in the body. As our customers, you have a right to know what you should do, what happened, and what we are doing to correct this situation.

We routinely monitor the presence of drinking water contaminants. The notification level for PFOA is 4.0 ng/L and the response level is 10 ng/L. Over the last year, the running annual average level of PFOA in Well 1 was 26 ng/L, Well 2 was 14 ng/L, and Well 3 was 17 ng/L. The PFOS level in Wells 1, 2, and 3 is above the State Water Board established response level.

What should I do?

- Continue using bottled water for drinking.
- This is not an immediate risk. If it had been, you would have been notified immediately. However, *some people who drink water containing PFOA in excess of the notification level (5.1 ng/L) over many years may experience adverse health effects. PFOA exposures have been shown to cause increased liver weight and cancer in laboratory animals.*
- If you have other health issues concerning the consumption of this water, you may wish to consult your doctor.

What happened? What is being done?

Lake Morena Views Mutual Water Company (LMVMWC) Has Levels of Perfluorohexane Sulfonic Acid (PFHxS) Above the Response Level

Our water system recently confirmed a detection of PFHxS above the public health-based response level. *PFHxS has been shown to interfere with levels of thyroid hormones*. As our customers, you have a right to know what you should do, what happened, and what we are doing to correct this situation.

We routinely monitor the presence of drinking water contaminants. The notification level for PFHxS is 3.0 ng/L and the response level is 20 ng/L. Over the last year, the running annual average level of PFHxS in Well 1 was 43 ng/L, Well 2 was 21 ng/L, and Well 3 was 87 ng/L. The PFOS level in Wells 1, 2, and 3 is above the State Water Board established response level.

What should I do?

- **If YOU ARE PREGNANT OR BREAST FEEDING, DO NOT DRINK THE WATER. DO NOT USE THE WATER TO MAKE INFANT FORMULA.** *Thyroid hormones are needed for normal prenatal growth and development of the fetus, as well as for normal growth and development in the infant and child. In adults, thyroid hormones are needed for normal metabolism and mental function*.

- **DO NOT BOIL THE WATER.** Boiling, freezing, filtering, or letting water stand does not reduce the PFHxS level.

- If you have other health issues concerning the consumption of this water, you may wish to consult your doctor.
